

ELN@RWTH

A Central Service for Electronic Lab Notebooks

Central ELN Software

eLabFTW, a domain-agnostic and flexible ELN software, is provided to all RWTH researchers, free of cost. This centralized instance allows you to create structured documentation, share your documentation within and across teams, and assists in digitizing research workflows.

A second education instance allows you to incorporate ELNs and research data management into your courses.

University-wide ELN Community

Those who work with ELNs in their daily research often have the best solutions. Find out about the various opportunities and channels for exchange that allow you to connect with others, even if you use another ELN software.

Support

The IT Center offers first and second-level technical support for the ELN. Additionally, we collaborate with the software developers to report issues and bugs and make feature requests. We also engage with the broader ELN community to stay informed about requirements and current developments.
